Item 2.1

TO: DISTRIBUTION (Title: FWD: 21st Century AXT Order)

Item 2.2

As some of you know, we had to reschedule our meeting to talk about unbundled loops associated with AXT service until tomorrow, march 8, at 9:30AM Chicago time. The conference number (877-363-0524) and passcode (5568167) remain the same.

On the call I want to basically address two issues:

1) We need to develop a method to process other orders for unbundled loops where the end user customer has access to an AXT. I anticipate this will be a relatively short term situation, approximately a year, until the remaining AXTs can be eliminated. We also need to arrive at a date when we can start processing additional orders for these loops. 21st Century has already contacted me about other customers they want to serve.

2) We need to develop a way to determine where we have already installed unbundled loops associated with AXT service. 21st Century tells me they have a number of customers in AXT buildings who are being served using unbundled loops. Service for these customers was established in one of two ways: working with the AXT service, or with the AXT service disconnected. Where the AXT service has been disconnected, they want the service hooked up so that it works with the AXT. As a preliminary matter on this issue, does anyone know where we can get a list of the buildings which have AXT service?

Please call if you have questions or want to discuss further.

Item 2.3.1

TO: DISTRIBUTION (Title: 21st Century AXT Order)

Item 2.3.2

First of all I want to give a huge "thank you" to Kathy, Miriam, Dennis, Redy and Tom for all of their efforts in getting the test order for an unbundled loop to work with an AXT installed for 21st century. I know there were many problems to overcome, but through their efforts the job was completed and we at least have given 21st Century one less thing to complain to the ICC about. Thank you all!

Now comes the next step. We will have to offer this type of arrangement for CLECs to use with other customers until such time as

the retail units can get the AXT service "sunsetting" (removed from the remaining customers). I anticipate that this might take a year because of the need for the building owners who subscribe to the AXT service to find a replacement.

In order to make this offering work, I need your help to develop a simple practice which we can use to help other technicians know how to provision this arrangement. I thought it would be helpful if the people who worked on the 21st Century test order could share their experiences in getting this thing to work.

To get started, I have set up a conference call for tomorrow, March 7, at 9:00AM Chicago time to discuss what needs to be done. The conference number for this call is 877-363-0524 and the passcode is 5568167. Please feel free to share this e-mail with others who may be involved in the process. If anyone wants a copy of the rough drawing I have of how these connections are made, please let me know.

My goal is to have a process in place quickly so 21st century and others can begin to process loop orders for services which make use of the AXT.
